SUMMARY

iOS Software Engineer with hands-on experience designing, building, launching, and maintaining production iOS applications using Swift and SwiftUI. Experienced across the full mobile development lifecycle including architecture, UI development, in-app purchases, analytics integration, App Store deployment, testing, and post-launch iteration. Strong product mindset with a background in software development, digital marketing, and user acquisition. Comfortable working independently, collaborating across disciplines, and leveraging AI-assisted development workflows to rapidly deliver high-quality mobile experiences.

WORK EXPERIENCE

Software Developer / iOS Application Developer

Aug 2009 - Present

Suncoast Publishing | Punta Gorda, FL

- Designed, developed, and launched multiple iOS applications using SwiftUI and modern Apple frameworks.
- Owned the complete product lifecycle from concept and technical design through implementation, testing, release, analytics, and post-launch iteration.
- Built and shipped True Lock Tuner, a production guitar utility application featuring real-time audio processing, tuning detection, metronome functionality, chord recognition, alternate tunings, and advanced practice tools.
- Implemented in-app purchases using StoreKit and RevenueCat, including entitlement management, purchase restoration, and premium feature gating.
- Integrated analytics and observability tools to monitor feature adoption, user engagement, and monetization performance.
- Designed reusable SwiftUI components using MVVM architecture patterns, asynchronous workflows, and modular design principles to support scalable feature development and long-term maintainability.
- Managed the complete App Store release lifecycle including testing, debugging, submission, compliance, privacy disclosures, screenshots, metadata, and post-launch updates.
- Utilized Git, GitHub, Xcode, and AI-assisted development tools to accelerate feature delivery and improve engineering productivity.
- Integrated RESTful APIs and structured data models to support application features and responsive user experiences.
- Collaborated directly with users to identify product opportunities, prioritize enhancements, and continuously improve user experience based on real-world feedback.

Featured iOS Applications

True Lock Tuner (App Store)

[View on The App Store](#)

Swift, SwiftUI, AVFoundation, StoreKit 2, RevenueCat, TelemetryDeck, Git

- Built and launched a consumer-facing iOS application using SwiftUI
- Implemented real-time audio analysis and pitch detection
- Developed metronome, tempo training, gap-click, and chord recognition features
- Implemented 12+ alternate tunings
- Developed multiple premium practice features
- Integrated StoreKit and RevenueCat for monetization
- Added TelemetryDeck analytics for privacy-focused usage tracking
- Built analytics tracking across core user workflows
- Managed source control workflows using Git and GitHub, including feature development, versioning, and release management.
- Performed manual QA testing, simulator testing, device testing, and release validation throughout the App Store deployment process.
- Managed App Store deployment and ongoing feature releases

SnoozeLock (App Store)

[View on The App Store](#)

SwiftUI, HealthKit, CoreMotion, AVFoundation, StoreKit 2

- Developing a mission-based alarm application using SwiftUI
- Implementing challenge-driven alarm dismissal including math, typing, barcode scanning, step counting, and mission recall
- Designing scalable architecture for future challenge expansion and premium features
- Building one-time purchase monetization model

Card Deck

[View in GitHub](#)

- Built SwiftUI card game application
- Collaborated with development team
- Implemented game logic and user interactions

Selected Accomplishments

- Successfully launched consumer-facing applications on the Apple App Store.
- Built and maintained complete iOS products from concept through release.
- Integrated monetization, analytics, and App Store distribution pipelines.
- Leveraged AI-assisted development workflows to accelerate implementation and iteration.
- Managed all aspects of product development including engineering, testing, deployment, analytics, and growth.

EDUCATION

General Assembly (New York)
Software Engineering Immersive

Oct 2022 - Jan 2023

SKILLS

iOS Development

Swift

SwiftUI

UIKit

Xcode

StoreKit

RevenueCat

Combine

Async/Await

MVVM

Dependency Injection

App Store Connect

Mobile Engineering

Mobile Architecture

API Integration

Analytics & Telemetry

Debugging & Performance Optimization

Git & GitHub

CI/CD Concepts

TestFlight

Agile Development

Additional Technologies

Python

Django

React
